Outline

- **Context: Global and Chinese Perspectives in SWB**
- Research Questions and Hypotheses
- Data and Method
- Findings
- Discussions

Context: Global Perspectives in SWB

- Individual Determinants

- Gender, Age, Marital Status, (Diener et al. 2000; Dush and Amato 2000)
Race, Ethnicity (Barger et al. 2009; Chow 2005)
- Education (York and Bell 2014), Income (Diener et al. 1993), Employment
, Occupation (Dolan et al. 2008)
- Religious Affiliation / Commitments (Ellison 1991)
- Physical Health (Veenhoven 2008); Cognition / Personalities (Lyubomirsky
2001; Ryan and Deci 2001)
- Social Capital, Social Life and Social Networks (Helliwell and Putnam
2004)

Context: Global Perspectives in SWB

- Contextual Determinants
 - Development and Affluence (Evans and Heller 2018; Sarracino 2013)
 - Inequality (Kelly and Evans 2017; Oishi, Kesebir and Diener 2011)
 - Welfare and Social Security (Veenhoven 2000);
 - Cultural, Linguistic, Religious Factors (Diener et al. 2009)
 - ...

Context: Chinese Perspectives in SWB

- Factors that are unique to Chinese context
 - Rapid economic growth & Severe Inequality in Various Dimensions
 - (1) *Hukou system (Qian and Qian 2015), Urban-Rural Divide, institutional arrangements of residence, life opportunities and resources*
 - (2) *Political Affiliation such as CCP, State-sectors, “iron rice bowl” (Wang and Xie 2016)*
 - (3) *Transition to Market Economy*
- What about their joint effects?

Outline

- Context: Global and Chinese Perspectives in SWB
- **Research Questions and Hypotheses**
- Data and Method
- Findings
- Discussions

Does Political Privilege Matter?

- Yes.
- Does the effect vary across ...?
 - *Cohorts* (an indirect measure of the changing centrality of CCP status in redistribution, life opportunities and happiness)
 - *Urban-Rural Divide* (lifestyle, benefits, opportunities vary across *Hukou/Residence*)

Why CCP, Cohorts, and Locations matter?

Why CCP, Cohorts, and Locations matter?

- Overall, political status (CCP membership) is associated with distributional advantages, career opportunities, and the quality of life.
- Yet, political changes (1949-present) will lead to quite different patterns of distribution and redistribution and thus influence dynamics of happiness – cohort could serve as an indirect detector of such changes over time.
 - Why not APC model? (data availability – pre-1990 China)
- The impact of changes (especially the Post-Mao economic reform) varies across urban and rural areas.

Hypotheses

- H1: Chinese Communist Party members are happier than non-members.
- H2: Impacts of political status vary across birth cohorts.
- H3: Interaction effects between political status and cohorts are conditioned by the location of residence.

Outline

- Context: Global and Chinese Perspectives in SWB
- Research Questions and Hypotheses
- **Data and Method**
- Findings
- Discussions

Data: Chinese General Social Survey (2003-15)

- Nation-wide representative data based on stratified sampling
 - Conducted by Hong Kong University of Science and Technology and Renmin University of China
 - Multi-stage stratified sampling: provinces – counties – neighborhoods – households
 - 9 waves so far: 2003, 05, 06, 08, 10, 11, 12, 13, 15

DV: Happiness

- Dependent Variables
 - Happiness (1-5 scale)

- Ordinal or Interval-Ratio?
 - Previous practices have adopted both before; their results are often similar. This research follows the practice by Wang and Xie (2016) and Wu and Li (2017) to treat it as an interval-ratio response.

Independent Variables (IV)

- Controls
 - Year/Wave of Survey dummies
 - Gender, Education, Logged personal income
 - Provincial GDP PC, Gini
 - Weighting Variable
- Focal Predictors
 - CCP Membership (dummy, 0 = non-CCP member)
 - Urban-Rural Divide (dummy, 0 = Rural)
 - Birth Cohorts (six categories)
 - *1910-45; 1946-55; 1956-65; 1966-75; 1976-85; 1985-present.*

Modelling Strategy

- *HLM + Age-Period-Cohort = HAPC* models
 - Nearly 90,000 individuals nested within 31 provinces
 - Fixed Effects of Individual Level Predictors
 - Random Intercepts of Provincial Units
- Models:
 - Model 1: Political Status.
 - Model 2: Political Status * Birth Cohorts.
 - Model 3: Political Status * Birth Cohorts * Urban.

Outline

- Context: Global and Chinese Perspectives in SWB
- Research Questions and Hypotheses
- Data and Method
- **Findings**
- Discussions

Findings

- H1: Chinese Communist Party members are happier than non-members. (✓)
- H2: Impacts of political status vary across birth cohorts. (✓)
- H3: Interaction effects between political status and cohorts are conditioned by the location of residence. (✓)

Discussions

- What are the implications for the market transition debate?
 - Politics matter, but it matters less now (depoliticized economy).
 - The impacts of social change on happiness are more profound for urban China.
 - Temporal and Spatial Diffusion of De-politicization

A high-angle, wide shot of a busy pedestrian street, likely in a European city. The street is filled with people walking in various directions. On the right side, there are tall, ornate buildings with classical architectural features. A red banner hangs from one of the buildings, displaying the text "DB News Schmitt & Hansen" and "Presse Büro". The entire image is covered with a semi-transparent dark overlay, which makes the yellow text stand out prominently in the center.

THANK YOU!
